Mr. Rawal,

We have a 35-ton package rooftop AC unit on our county library that was grossly oversized and therefore would not dehumidify the library sufficiently. Books were molding and it was very uncomfortable even though the temperature was being maintained. The first attempt to fix this problem was to add electric strip heat to “false load” the unit to increase the runtime in the cooling cycle. This worked as far as dehumidifying the library but the electric bill skyrocketed. We then installed a Rawal device. This device has performed wonderfully and has allowed us to shut off the electric strip heat, greatly reducing the electric bill while at the same time, maintaining humidity and temperature better than with strip heat. We are very pleased with the results and we are about to order three more Rawal devices.

Thank you for a great product that performs as advertised.

Sincerely,
Keith Chandler
